

We Produce. We Deliver. We Care.

In the spring of 1969, the Ferrara brothers used their entire life savings to acquire five used concrete mixer trucks (circa 1949 and 1950) from Boston Sand and Gravel and began operating a small, inland concrete batch plant in Ozone Park, NY. Through the leadership of the Ferrara brothers, they persevered through these meager beginnings and slowly and steadily grew by investing in plants, equipment, technology and its most important asset – our people. Through hard work, determination, and an unwavering focus on quality and service, they – along with the second and third generation Ferrara family members – built Ferrara Bros. to become one of the most highly regarded concrete producers in the metropolitan New York market.

Ferrara Bros. has historically focused on servicing all boroughs of New York City from strategically located ready-mixed concrete plants in Queens and Brooklyn. Through a recent merger and acquisition, Ferrara Bros. inherited additional plants in Brooklyn, Staten Island and Westchester from Eastern Concrete Materials, a U.S. Concrete company. As a result, Ferrara Bros. now operates a total of 10 concrete batch plants (five of the 10 plants are central-mix plants) and more than 150 trucks in NYC, greatly expanding its service and delivery capabilities for the growing NYC market. A new twin-shaft plant will come on-line in 2016 to further our production capabilities.

Our Mission

At Ferrara Bros., we are committed to achieve the highest standards of quality and service – and provide true value – in the concrete industry by:

- Working together productively, safely and respectfully, with all our employees, vendors and customers in an environmentally responsible manner.
- Acting honestly, with integrity, in all we do.
- Exceeding our customers' expectations through continuous improvement.

Dedicated, in-house fully licensed QC/QA Laboratory

Ferrara Bros. develops, tests and certifies its concrete mixes in our dedicated, NYC Department of Buildings licensed and AMRL (AASHTO Materials Reference Laboratory) accredited laboratory, Aggregate & Concrete Testing, LLC (“ACT”). Only one other concrete producer in NYC has a similar, dedicated and accredited laboratory. All other concrete producers rely on third-party labs. And no NYC concrete testing lab comes close to the level of staffing, number of accreditations and certifications, or the amount of testing done by Ferrara Bros. and ACT.

Our AMRL accredited and DOB licensed concrete testing laboratory is staffed by seven full-time QC/QA personnel complimented by an additional six people working full-time in the plants and field – all of whom have undergone stringent NRMCA and/or ACI training and certifications.

The benefits of working with Ferrara Bros., with its dedicated, licensed testing lab includes:

- Direct, prompt responses to concrete mix design requests resulting in significant time savings in producing and submitting TR-3 forms.
- Seamless, clear communications upfront and throughout the project.
- Immediate and direct access to our experienced team, allows us to produce and deliver high-performing mix designs to meet your specific requirements, while providing cost-effective options and alternatives.
- Assurance that we stand behind our mix design performance in the field.
